

## GYNECOLOGIC ONCOLOGY

The Gynecologic Oncology team at Keck Medicine of USC treats some of the most complex cases in the Los Angeles area. Our multidisciplinary approach means that our medical, surgical and radiation cancer specialists work together to bring their combined skills and expertise to your care plan.

Our specialists have an exceptional level of expertise in treating ovarian cancer, uterine cancer, cervical cancer, vulvar and vaginal cancer, fallopian tube cancer and peritoneal cancer. In addition, rare cancers such as neuroendocrine cervical cancer, gestational trophoblastic disease and uterine sarcomas are also treated. Our highly-trained physicians are skilled in advanced surgical techniques including minimally invasive and robotic surgery.

As faculty members of the prestigious Keck School of Medicine of USC, the physicians stay up-to-date with research that allows them to make the most difficult of diagnoses. Because our team sees a high volume of patients, they possess a broad level of expertise in treating gynecologic cancers that gives them the edge on new and innovative therapies.

Our commitment is to care not just for the patient, but to make you feel cared for. We seamlessly weave together a multidisciplinary team of medical, surgical and radiation specialists that treats you from diagnosis to imaging and finally to treatment and after-care and support. Your team is always available to answer your questions, facilitate difficult decisions and customize an individual treatment plan for your specific condition and situation. You are unique, and we will treat you that way.

- Home to national leading experts pioneering breakthroughs in fertility sparing therapies for cervical cancer
- Experts in minimally invasive and robotic surgery
- Genetic counseling available to support patients who are at high risk of developing a gynecologic cancer

## WHO WE ARE

The gynecological cancer specialists at Keck Medicine of USC in Los Angeles take an individualized, patient-centered approach to care. This means our patients not only receive the latest in medical technology, medicines and minimally invasive procedures, but also the attention and whole-person support needed to combat cancer.

Unlike many medical centers, the gynecological cancer program provides services at every treatment step, from diagnosis through surgical procedures and chemotherapy, if

necessary. This also means that the physicians are experts at treating precancerous changes as well.

Our team participates in weekly patient care conferences in which physicians review patients' individual treatment plans and situations. Each specialist brings the most current knowledge in his/her field and, working together, can coordinate care to ensure an optimal outcome. This centralized treatment approach means our patients' entire course of therapy can occur at Keck Medicine.
