

USC Caruso Department of Otolaryngology Head and Neck Surgery

Keck Medicine of USC

FACIAL PLASTIC & RECONSTRUCTIVE SURGERY

Offering a full range of treatments for the face and neck

The expert facial plastic and reconstructive surgeons of **Keck Medicine of USC's Caruso Department of Otolaryngology – Head and Neck Surgery** are as dedicated to providing an exceptional patient experience as they are to using the most state-of-the-art treatment options available.

Surgical offerings include both reconstructive and cosmetic procedures, including face lift, facial rejuvenation, rhinoplasty, facial paralysis surgery, eyelid surgery, chin augmentation and hair restoration. Also offered are a full range of non-surgical procedures, such as Botox®, dermal fillers, chemical peels, laser skin resurfacing, skin tightening and more. The team collaborates with colleagues such as dermatologists, neurologists, physical therapists and speech therapists to assist patients who may have experienced facial trauma, congenital deformities or cancer.

WHAT TO ASK BEFORE FACIAL PLASTIC OR RECONSTRUCTION SURGERY

The decision to undergo facial plastic or reconstruction surgery is a very personal one. Patients need to discuss these procedures extensively with their surgeon in order to ensure they are on the same page before undergoing treatment. Here are key questions to ask before surgery:

How long will it take to heal from this surgery?

Facial surgery is momentous for patients because the face plays such a key role human identity. Knowing how long it will take to heal will help set your expectations throughout the surgery and the recovery process.

Will additional surgery be needed?

Most individuals undergoing elective procedures will not require additional surgeries. Discuss your options with your physician to ensure you understand the procedures and the commitment required.

How many times have you done this procedure? What are the positives and negatives of this surgery?

By asking these questions, you will be able to see exactly how experienced your doctor is and learn more about the experience. This understanding will help you feel more comfortable throughout the rigorous process of surgery and recovery.
