## USC GYNECOLOGIC ONCOLOGY

The gynecologic oncology team at USC Norris Comprehensive Cancer Center treats some of the most complex cases in the Los Angeles area. Being part of Keck Medicine of USC allows for a multidisciplinary approach where medical, surgical and radiation cancer specialists work together to bring their combined skills and expertise to the patient's care plan.

The gynecologic oncology specialists at USC Norris are experienced in treating ovarian cancer, uterine cancer, cervical cancer, vulvar and vaginal cancer, fallopian tube cancer and peritoneal cancer. In addition, rare cancers such as neuroendocrine cervical cancer, gestational trophoblastic disease and uterine sarcomas are also treated. Surgeons are skilled in advanced techniques including minimally invasive and robotic surgery.

As faculty members of the Keck School of Medicine of USC, the physicians have access to research that helps them treat the most difficult cases. Having experience with a high volume of patients has given the clinicians at USC Gynecologic Oncology a rare proficiency in treating gynecologic cancers.

The gynecologic oncology staff is committed to caring for the whole patient. Their approach to treatment carries each person from diagnosis to imaging and finally to treatment and after-care support. They are always available to answer questions, help facilitate difficult decisions and to customize an individual treatment plan for each patient's specific condition and situation.

## THE ADVANTAGES OF TREATMENT AT USC NORRIS

- Home to nationally recognized experts pioneering breakthroughs in fertility sparing therapies for cervical cancer
- Experts in minimally invasive and robotic surgery
- Genetic counseling available to support patients who are at high risk of developing a gynecologic cancer
- A multidisciplinary team working together to develop fully comprehensive treatment plans
- Expertise in a full range of cancer types, including rare and particularly aggressive cancers
