

USC ORTHOPAEDIC SURGERY

Providing the best outcomes possible

USC Orthopaedic Surgery is one of the most comprehensive orthopaedic programs in the United States, offering expertise in diagnosis, treatment and rehabilitation of a wide array of orthopaedic issues. The clinicians provide care for a variety of subspecialties, including sports medicine, joint preservation and replacement, management of fractures and nonunions, hand surgery, foot and ankle disorders, musculoskeletal oncology, spinal disorders and treatment of infections.

Embracing a multidisciplinary approach, orthopaedic surgeons collaborate with specialists in plastic surgery, microvascular and vascular surgery, infectious disease and neurosurgery to ensure the very best in patient care. In addition to expert orthopaedic surgeons, the team includes physical and occupational therapists and pain management professionals who provide a high standard of care from diagnosis through recovery.

The focus stays on the patient, and the goal is to provide the best care possible throughout Southern California. From diagnosis to rehabilitation, the orthopaedic surgery department offers comprehensive services across the continuum of care so patients can return to a full and healthy life.

COMPREHENSIVE ORTHOPAEDIC CARE

For athletes at every level

The Epstein Family Center for Sports Medicine at USC Orthopaedic Surgery is equipped to treat a wide range of athletic injuries, such as tears, sprains and fractures.

USC sports medicine clinicians serve as the Official Orthopaedic Medical Services Provider of the Los Angeles Kings, as well as treating the Junior Kings, the USC Trojans football team and USC Intercollegiate Athletics.

Surgeons use minimally invasive surgical techniques, including arthroscopic surgery, microsurgery and robotic surgery to get patients moving again as quickly and safely as possible.

Exceptional joint care

The USC Joint Preservation and Replacement Center provides advanced care for the hip, knee, shoulder, ankle, elbow and hand.

Whether a patient lives with osteoarthritis, inflammatory arthritis, osteonecrosis or hip impingement, physicians at the center are prepared to help with the latest developments in medical treatment and surgical technique.

Advanced pain management regimens and physical therapy protocols provide additional tools through which the center's clinicians can restore optimal joint function.
